For a truly personalized result, certain artists prefer to tint their medium themselves. Play your hand!

## What you need to know

Tinting your paper has two benefits:

- Optimizing the background tint reduces the risk of overloading your drawing material.
- You can create several areas with different colors on the same sheet of paper.

## 1. Creating a background with dry pastel

- Reduce your pastel to powder by scratching it with a knife over a plate.
- Dip a rag or a piece of cotton wadding into the powder and rub it over the entire paper surface, pressing down enough to tint all the high and low points on the paper.
- Use sweeping circular or crisscross motions if you want to create a textured background.
- For a perfectly smooth finish, stomp with a big paintbrush.

**Trick of the trade:** by stabilizing the background with fixative ? or pressing a blotter down hard on the tinted paper ? you can keep the pigments from mixing with the ones you use for your work.

## 2. Original tints

?

**Dry or oil pastels can be used afterwards with these two techniques.**

- Go for transparency by using a watercolor or highly diluted India ink wash. Allow to dry completely before applying pastels.
- Imitate oriental tradition: rub white paper gently with moist tea leaves (or teabags). This will cover it with a very delicate tint!

**Note:** if you plan on using a wet technique, select water resistant paper, such as watercolor paper, and stretch it first to keep it from buckling.

**In the presence of moisture, pastels become pasty. When you moisten them more, you can use them as light washes.**
